Generic Medications

When you choose to fill your prescriptions with generic drugs, you can realize savings while still getting the quality you expect. In fact, generic medications have gained increasing popularity over the past several years due to their price points, safety and effectiveness.

- Generic medications are approved by the U.S. Food & Drug Administration
- Generic medications contain the same active ingredients in the same dosage and strength as the corresponding brand name drugs
- Generic medications typically cost less than their brand counterparts

Prescriptions Benefits under your Fixed Indemnity Limited Benefit medical plan:

The structure of benefits under a Fixed Indemnity Limited Benefit plan is different than typical prescription drug plans. Instead of paying a Copayment for your prescription drugs, with this program you will receive a credit for the Indemnity Amount paid by the plan as indicated on your insurance policy/certificate and Schedule of Benefits.

The Indemnity Amount indicated below, will be applied to your prescription drug purchase. Any remaining balance will be your responsibility:

Generic Drugs: \$ 4

Brand and Brand Formulary Drugs: \$ 20

Specialty Drugs: \$ 50
